Abstract

The abstract contains a summary, introduction, problems, methods, results, and conclusions. The abstract consists of one paragraph, using a one-column format, without tables and references, written briefly. Abstracts must summarize content without 100-200 words. (Times New Roman, 10pt, space 1)

Keyword: No more than five keywords (Times New Roman, 10pt, Bold, Italic).

INTRODUCTION (Times New Roman, 10pt, Bold)

A **brief background** on the general study should be started (try a maximum of one paragraph). **State of the art (a review of literature** or previous research briefly) with the aim of justifying a statement of novelty or the significance or **new contribution** or originality of this article. Try to have a reference article from the journal ten years that reinforces the justification of originality. Before writing the purpose of the study, there must be a **Gap analysis or statement of the gap** (originality) or novelty (novelty statement) clearly and explicitly, or the unique difference of this research compared to previous studies, also from the important side of whether the research was conducted, then write the **objectives the research** in this article is straightforward and clear. (Times New Roman, 10pt, space 1)

METHOD (Times New Roman, 10pt, Bold)

The methodology section contains the approach used in producing scientific articles. Specifically for scientific research articles, the methodology section includes research methods, populations, and samples, as well as data analysis steps. (Times New Roman, 10pt, space 1)

RESULTS AND DISCUSSION (Times New Roman, 10pt, Bold)

The results and discussion should at least contain: (1) (**what / how**) whether the data presented has been processed (not raw data), stated in tables or figures (select one), and given information that is easy to understand? Write down the findings or findings; (2) (**why**) in the discussion section shows a link between the results obtained and the basic concepts and / or hypotheses? The discussion made must be supported by real and clear facts, and (3) (**what else**) is there any compatibility or conflict with the results of other people's research ?. May it also be written about the implications of the results of both theoretical and applied research? (Times New Roman, 10pt, space 1).

Display the table as below:

Table 1. Data Analysis

| Number | Informant | Information |
|---------------|------------------|--------------------|
| 1. | | |
| 2. | | |
| 3. | | |

Source: explained

There are no vertical lines for the table. The table title is placed on top, middle. The source of the table is placed under the table.

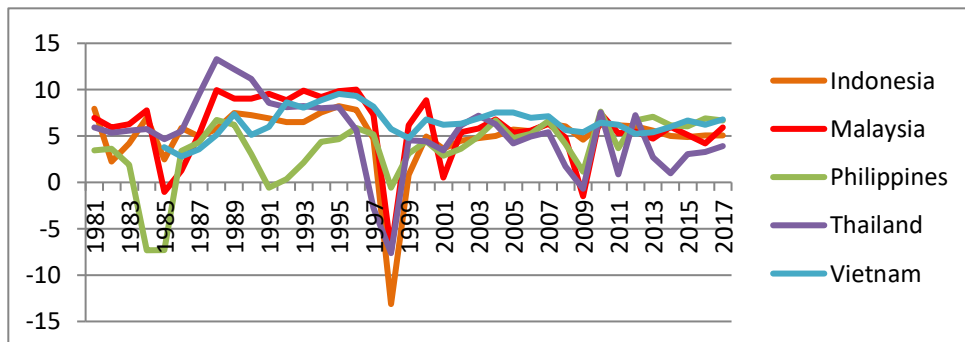

Figure 1. Picture Caption

Source: explained

The title of the image is placed at the bottom, middle. The source of the image is placed below the image.

CONCLUSION (Times New Roman, 10pt, Bold)

Conclusions are **only sufficient to answer the problem or research objective**, or can also produce a new theory/concept based on existing facts/analysis; don't be impressed to discuss again in the conclusions. May add implications or suggestions (not required). It should be written in paragraph form, not in the form of item list/numbering. Don't divide it into conclusions and suggestions. (Times New Roman, 10pt, space 1)

REFERENCES (Times New Roman, 10pt, Bold)

References are written using the American Psychological Association (APA) style. Valid for references in text, tables, and figures. The article writing process must use a reference manager program (Mendeley, etc.). Updated reference libraries, especially those used to justify originality or novelty (last ten years). Keprimaran literature reference, try at least 80% of the primary literature). If the book form literature should be a primary book (which contains direct research results, not a compilation of other people's research); Books containing theoretical concepts (secondary) may be used as a reference, but try only a maximum of 20%. (Times New Roman, 10pt, space 1).
